IBC 可视化工具：
MapOfZones 更直观的展示了链与链互连通道:<https://mapofzones.com/>
Mintscan 更详细的展示了中继器的相关信息:<https://hub.mintscan.io/chains/overview>
IOBScan 更便捷的可以通过交易哈希进行搜索:<https://ibc.iobscan.io/home>

一.Contents

1. **Core IBC Implementation**

1.1 ICS 02 Client

1.2 ICS 03 Connection

1.3 ICS 04 Channel: channelupgrade:<https://github.com/cosmos/ibc/blob/main/spec/core/ics-004-channel-and-packet-semantics/UPGRADES.md>
2.

1.4 ICS 05 Port

1.5 ICS 23 Commitment

1.6 ICS 24 Host
3. **Applications**

2.1 ICS 20 Fungible Token Transfers

2.2 ICS 27 Interchain Accounts

2.3 ICS-029-fee-payment：<https://github.com/cosmos/ibc/tree/master/spec/app/ics-029-fee-payment>

2.4 ICS-030-middleware：<https://github.com/cosmos/ibc/tree/master/spec/app/ics-030-middleware>

2.5 ICS-721-nft-transfer：<https://github.com/cosmos/ibc/tree/master/spec/app/ics-721-nft-transfer>
- 增加一个ibc跨链路由：<https://github.com/cosmos/ibc-go/pull/373/files>

IBC的app：<https://github.com/cosmos/ibc-go>
`async-icq`；`interchain-queries`；`query`；`packet-forward-middleware`；`recovery`；`ibc-rate-limit`

App

Interchain Standard Number	Standard Title	Stage	Implementations	Maintainer
<u>20</u>	Fungible Token Transfer	Candidate	<u>ibc-go</u>	Protocol team
<u>27</u>	Interchain Accounts	Candidate	<u>ibc-go</u>	Protocol team
<u>28</u>	Cross-Chain Validation	Draft		Protocol team
<u>29</u>	General Relayer Incentivization Mechanism	Candidate	<u>ibc-go</u>	Protocol team
<u>30</u>	IBC Application Middleware	N/A	N/A	Protocol team
<u>31</u>	Cross-Chain Queries	Draft	N/A	Protocol team
<u>32</u>	Interchain Queries	Candidate	<u>async-icq</u>	<u>Strangelove Ventures</u>
<u>100</u>	Interchain Atomic Swap	Candidate	<u>ibcswap</u>	<u>Side Labs</u>
<u>721</u>	Non-Fungible Token Transfer	Candidate	<u>nft-transfer</u>	<u>IRIS Network</u>

callback插件介绍：<https://ibc.cosmos.network/architecture/adr-008-app-caller-cbs>
Evmos：Evmos will be among the first chains to implement callbacks middleware @IBCProtocol：
<https://twitter.com/EvmosOrg/status/1710218376696778839>
博客介绍：<https://www.ibcprotocol.dev/blog/callbacks-middleware-evmos-case-study>
代码：<https://github.com/cosmos/ibc-go/tree/main/modules/apps/callbacks>

4.Light Clients

- 3.1 ICS 07 Tendermint

3.2 ICS 06 Solo Machine

3.3 [:https://github.com/cosmos/ibc-go/tree/main/modules/light-clients/08-wasm](https://github.com/cosmos/ibc-go/tree/main/modules/light-clients/08-wasm)

3.4 [:https://github.com/cosmos/ibc-go/tree/main/modules/light-clients/09-localhost](https://github.com/cosmos/ibc-go/tree/main/modules/light-clients/09-localhost)

5. IBC Relayer

Go语言实现的relayer：<https://github.com/cosmos/relayer>
Rust语言实现的relayer：<https://github.com/informalsystems/ibc-rs/tree/master/relayer>； <https://github.com/informalsystems/hermes>
Typescript语言实现的IBC Relayer：<https://github.com/confio/ts-relayer>

二.Roadmap

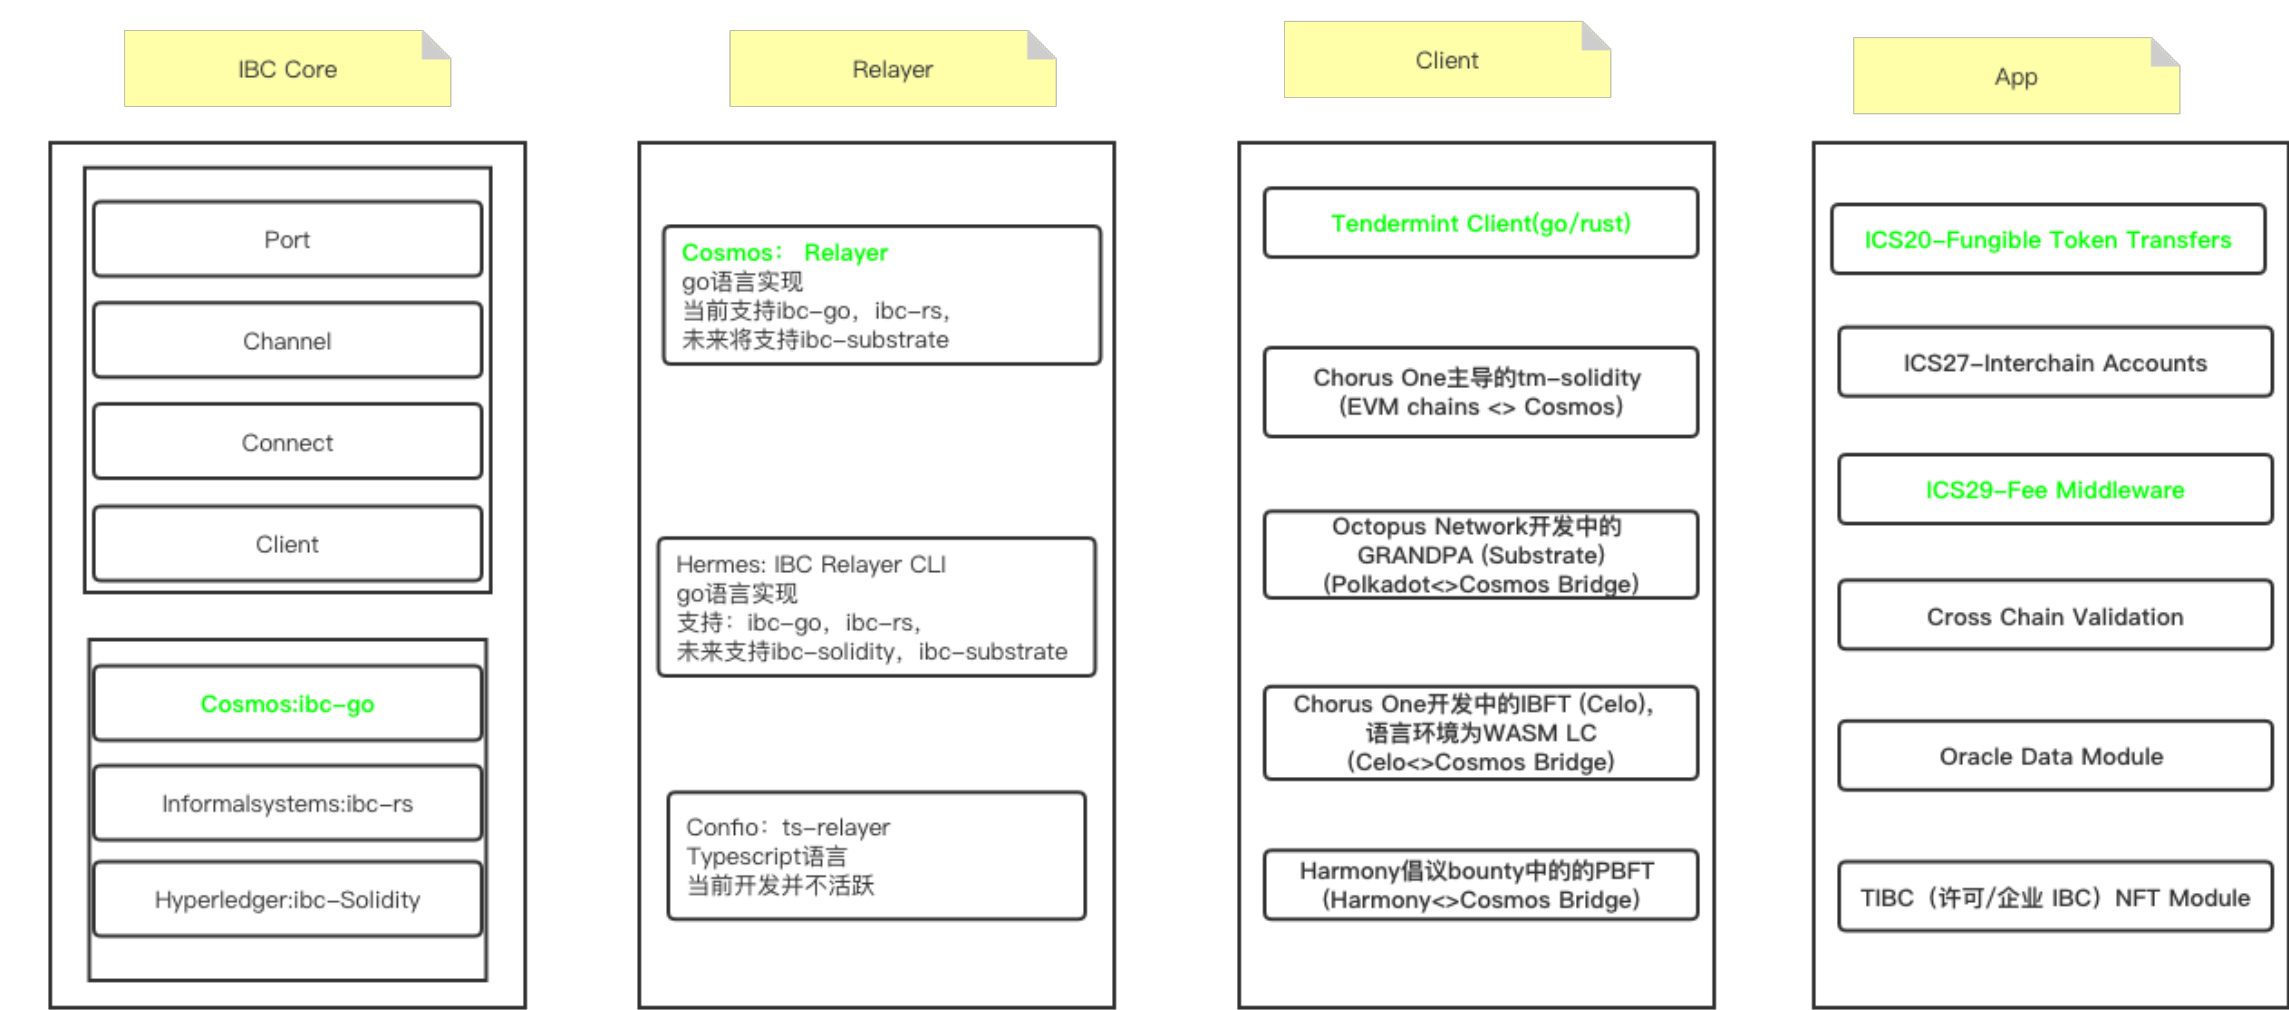

For an overview of upcoming changes to ibc-go take a look at the [roadmap](#).

三：生态项目：

In the table below app refers to IBC application modules for custom use cases and middleware refers to modules that wrap an IBC application enabling custom logic to be executed.

Description	Repository
An application that enables on chain querying of another IBC enabled chain utilizing baseapp.Query. Both chains must have implemented the query application and ICA (for queries requiring consensus).	<u>ICQ</u>
An application that enables on chain querying of another IBC enabled chains state without the need for the chain being queried to implement the application.	<u>interchain-queries</u>
An application that enables on chain querying of another IBC enabled chains state without the need for the chain being queried to implement the application. Similar to the interchain-queries application in the row above but without callbacks.	<u>query</u>
An application that enables cross chain NFT transfer.	<u>NFT Transfer (ICS 721)</u>
Middleware enabling a packet to be sent to a destination chain via an intermediate chain, e.g. going from Juno to Osmosis via the Hub.	<u>packet-forward-middleware</u>
Middleware enabling the recovery of tokens sent to unsupported addresses.	<u>recovery</u>
Middleware that limits the in or out flow of an asset in a certain time period to minimise the risks of cross chain token transfers.	<u>IBC-rate-limiting</u>

四：IBC-工程：

- 五：
- IBC 协议的 3 个核心层及其与互联网的类比：
- 应用 <> HTTP、gRPC ⇒ IBC 跨链账户。
 - 传输 <> TCP、UDP ⇒ IBC 通道。
 - 状态 <> 物理网络 ⇒ IBC 连接和轻客户端。
